Government General Degree College, Lalgarh is dedicated to cultivating a sustainable and ecoconscious campus ethos. Acknowledging the pivotal role of energy conservation in fostering a cleaner and greener environment, the college has formulated a Comprehensive Energy Conservation Policy. This policy aims to address various facets of energy consumption, management, and efficiency within the campus premises. By adhering to this policy, our objective is to curtail energy footprint and cultivate a culture of energy consciousness among students, faculty, and the wider community. The college is responsible for energy management in shaping a sustainable tomorrow. This policy actively promotes energy- saving initiatives, urging active participation from students, faculty, and staff in endeavors that contribute to efficient energy consumption.

Energy conservation policies at college campuses include the following measures:

Lighting: Use energy-saving bulbs and fixtures, such as LED or compact fluorescent bulbs. Turn off lights when not in use, and use daylight instead.

Temperature: Adhere to temperature set points.

Windows and doors: Keep windows and doors closed when the air conditioning is on.

Electronics: Unplug electronics when not in use, or use power strips with switches.

Vehicles: Use electric vehicles to transport people and materials across campus. Encourage students and staff to use bicycles or carpool.

Landscaping: Use trees and plants to create a cool atmosphere on campus, and to build awareness around the environment.

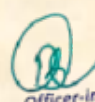

Awareness: Create awareness among students and staff about energy conservation. For example, organize energy campaigns.

Waste management: Develop a systematic waste management mechanism.

Rainwater harvesting: Develop a rainwater harvesting unit.

Monitoring and Reporting: The policy encompasses systems for monitoring and reporting energy consumption, performance metrics, and progress towards energy conservation goals.

Compliance and Regulations: The scope extends to ensuring compliance with relevant energy conservation regulations, standards, and best practices, as well as striving to exceed compliance requirements where feasible.
